Education

Chhattisgarh Swami Vivekanand Technical University (CSVTU), Bhilai **2021 – 2025**

B.Tech in Computer Science

- **Certifications:** Data Analytics – Deloitte | Prompt Engineering Pro – Udemy | Python App Development – Udemy

Work Experience

Innodata India Pvt. Ltd. **Dec 2025 – May 2026**

AI/LLM Analyst *Noida, India*

- **Evaluated outputs from LLMs** for factual accuracy, instruction adherence, reasoning quality, and consistency across diverse task categories including code, QA, summarization, and structured generation.
- Applied structured annotation rubrics and evaluation guidelines to **validate AI-generated responses** against project requirements, maintaining high-quality standards across prompt-response pairs and edge-case scenarios.
- Reviewed **RAG** pipeline outputs for grounding, retrieval relevance, and hallucination reduction — providing detailed feedback that directly improved model response quality.
- Collaborated on identifying failure patterns in LLM responses across multi-turn conversations and complex instruction-following tasks, contributing to iterative prompt and pipeline improvements.

Smedketing **Apr 2023 – Nov 2025**

Full Stack Developer (Part-time)

- Developed and maintained full-stack web applications using **React.js**, **Node.js**, **express.js**, and **MySQL**.
- Designed and implemented **RESTful APIs** for seamless communication between frontend interfaces and backend services.
- Optimized database queries and application performance, improving response times and ensuring efficient data retrieval.
- Integrated third-party APIs and implemented authentication, error handling, and debugging solutions to enhance application reliability.

Projects

Travel Planning AI Agent | *Agentic Tool-Use, Multi-hop RAG, Vector Memory* | GitHub | Live Demo **July 2026**

- Built an autonomous 2-day trip-planning agent that dynamically orchestrates 3 tools (weather, web search, Wikipedia multi-hop RAG) via an LLM planner on **Groq (Llama 3.3 70B)**, with dual-layer memory — conversation context + a **ChromaDB** vector store for cross-session preference recall — at zero API cost.
- Deployed a **FastAPI** REST service and reasoning-transparent chat UI, containerized with **Docker** on Render; validated 10/10 on a custom eval harness (tool reliability, memory recall, planning accuracy).

LLM Evaluation Dashboard | *Hallucination Detection, Web Grounding* | GitHub **Jun 2026**

- Built a full-stack **LLM observability** platform that evaluates Groq (Llama 3.3 70B), Gemini 2.0 Flash, and Mistral Small in parallel, scoring each response on hallucination, relevance, faithfulness, and toxicity metrics.
- Implemented a web grounding layer using Wikipedia REST API that auto-detects real-time queries and injects current context before LLM calls, reducing factual hallucination on time-sensitive questions.
- Built a 5-page **Streamlit** dashboard with live score trend charts, model leaderboard radar chart, cost tracker, latency distribution, and an alert feed that fires when quality metrics breach thresholds.

Multi-Agent Coding Assistant | *LangChain, LangGraph, Ollama, Streamlit* | GitHub **Jun 2025**

- Built a 3-agent pipeline (Planner → Coder → Debugger) using **LangGraph** for orchestration and **LangChain** with **Ollama** for fully local LLM inference — zero API cost.
- Agents communicate via shared state: Planner decomposes tasks, Coder writes Python, Debugger reviews and fixes bugs before final output.
- Deployed a Streamlit web UI with model selector, agent output panels, and one-click code download.

Technical Skills

AI / LLM: LangChain, LangGraph, Prompt Engineering, RAG, AI automation, N8N, Agentic AI
ML & Data: PyTorch, TensorFlow, Scikit-learn, NLP, Pandas, NumPy
Vector DBs: ChromaDB, FAISS, Pinecone
Backend: Python, FastAPI, REST APIs, SQL, MongoDB
Cloud: AWS (EC2, S3, IAM)
Tools: Git, Docker
